SNS Non-Intrusive Short

Specification

All dimensions in inches.

SNS Specifications

Time Constant: Maximum time to reach 63.2% of a step change in temperature in water flowing at 3 fps.	12.0 seconds
RTD Repeatability: Maximum change in resistance at 0°C after 10 cycles over the full temperature range.	0.04%
RTD Long Term Stability: Maximum change in resistance at 0°C after 1000 hours at 200°C	Precision: 0.01% Standard: 0.10%
RTD Hysteresis: Maximum % error at the mid point of the operating temperature range. (Example: 0.04% over a 250°C range = 0.10°C)	Precision: 0.04% Standard: 0.08%

General Specifications:

» See page 4 of this catalog

• Process Connections:

- » Hygienic ferrules for hygienic clamp union connection
- » Weld-ends squared off to support automatic weld process

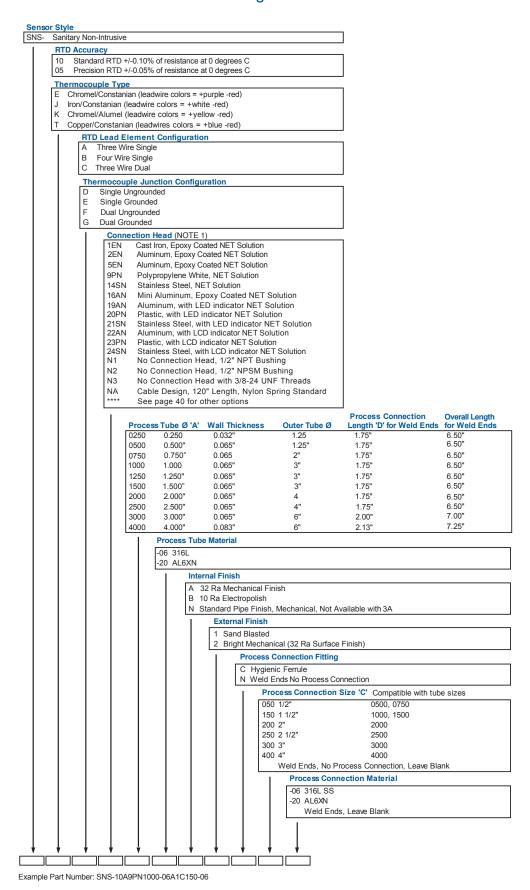

• Installation Length:

- » For assemblies with hygienic ferrules, the OAL is 5.0 inches.
- » For assemblies with weld-ends, to support automatic welding, the OAL range is 6.5 to 7.25 inches based on the process tube size. See ordering information table under 'Process Tube Ø'

SNS Non-Intrusive Short

Ordering Information

NOTE 1: For full descriptions see page 40 or: www.BurnsEngineering.com/Con-Heads.pdf

Specifications

RTDS

Operating Temperature Range:

-50°C to 200°C

Element Resistance:

100 ohms at 0°C nominal

Temperature Coefficient of Resistance (alpha):

 $0.00385 \Omega/\Omega/^{\circ}C$ nominal

Accuracy:

Standard: 0.10% of resistance at 0°C Precision: 0.05% of resistance at 0°C

Insulation Resistance:

100 megohms minimum at 100 VDC at 25°C (Not applicable for grounded thermocouples)

Interchangeability:

For 100 ohm elements the tolerance values at any temperature for these specifications are given by: Tolerance $^{\circ}C = \pm (0.13 + 0.00185 \text{ ItI})$ for accuracy code 05 Tolerance $^{\circ}C = \pm (0.26 + 0.0037 \text{ ItI})$ for accuracy code 10 (ItI = absolute value of temperature in $^{\circ}C$)

Leadwire:

PTFE insulated nickel-plated stranded copper, 22 and 24 AWG typical

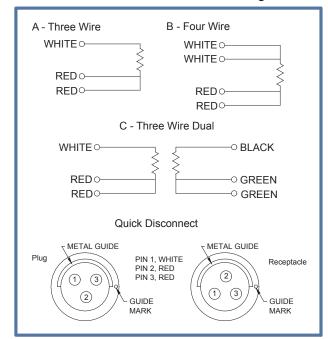

Sheath Material:

316L stainless steel typical

100% Tested:

For accuracy at 0°C and insulation resistance

Color Codes Element/Leadwire Configuration

Temp	erature	Interchangeability			
°C °F		0.05%**		0.1	0%
-50	-58	±.23°C	±.41°F	±.45°C	±.80°F
0	32	±.13°C	±.23°F	±.26°C	±.46°F
100	212	±.32°C	±.57°F	±.64°C	±1.15°F
200	392	±.50°C	±.90°F	±1.00°C	±1.80°F

^{** ±0.05} accuracy is not currently available with all models. See the Ordering Information Table for each model for applicability.

Thermocouples

The tables listed below are provided to the user for a ready reference of thermocouple designations as compared to the generic and trade names for the most common thermocouple materials. The letter "P" in the designation indicates the positive (+) leg of the thermocouple while the letter "N" designates the negative (-). Color coding and other means of conductor identification are also provided. Specification reference per ASTME230 / E230M.

ANSI Thermocouple Type	Temperature Range	Special Limits	
E	-50°C to 125°C 125°C to 200°C	±0.5°C ±0.4%*	
J	0°C to 200°C	±1.1°C	
К	0°C to 200°C	±1.1°C	
Т	-50°C to 125°C 125°C to 200°C	±0.5°C ±0.4%*	

^{* %} applies to measurement in °C

Thermocouple Grade Wire

ANSI Type	Grade or Generic Trade Names	Single Conductors	Magnetic	Conductor Color Code	Overall Color Code
